There were proper error messages, however they were in a different language than the rest of the application.

If you could improve one thing in this app, what would it be?

5 responses

One thing I would improve with the app is that design wise, you should probably put an icon on the browser as well as change the title of your app instead of the basic vite and react title. Additionally, try to reduce the amount of whit space in your app since it will look more modem.

I would probably improve the design of the website. The title could be more prettier with a favicon. Overall well done!!!

To change the error messages to match the language of the rest of the application

It would be about non-plant information. For example, if the plant is unclear in the picture even though it is for humans, there should be suitable messages for clarification.

If I had to improve something in the app, I would probably add animations to the app between changing pages and adding and dropping in images.

Feel free to provide addition information to help us improve:

Very nicely designed application. Useful, would use myself.

I really love the UI and the green theme. The buttons work perfect and smooth. The information card layout are soothing to look at and I can see myself using this website to get info about unknown plants in my mom's apartment.

Rating for application:
